COASTAL BIRD STEWARDSHIP & OUTREACH

Siuslaw National Forest
Delayna M. Canon

INTERPRETATION
My summer at Cape Perpetua was a whirlwind adventure in wildlife interpretation. I had goals of making science education accessible, and that is exactly what I set out to do.

FIELD WORK
Opportunities such as wildlife surveys, species relocation, and habitat restoration were some of the activities that strongly contributed to my experience in field work. Seeing tangible positive change was inspiring.

TABLING
Our team provided vital, accessible, and educational experiences for visitors on an interpersonal level. We touched on subjects such as the ocean forest connection, threatened species, cultural history, and forest conservation.

PROGRAMS
I was given creative control when designing educational programs. I had an outreach of over 3500 people with tabling, an evening campground program about coastal birds, a sign language project, and my favorite program: "Egg-cellent Eggs!"
